

Evaporative Air Conditioning

The smart choice for top air conditioning performance and the best value for money system around.

RANGE OF UNITS ARE AVAILABLE IN DOWN, SIDE AND TOP DISCHARGE MODELS.

Their simplicity and versatility allows them to be installed almost anywhere, and in any application.

DOWN DISCHARGE

Down discharge systems are usually roof mounted, and suitable for both ducted and plenum applications. They represent a very cost effective solution to a cooling problem. A 550mm x 550mm dropper duct serves as both mounting bracket and air distributor.

TOP DISCHARGE

Top discharge unit's suit applications where convenient access to a floor mounted air conditioning unit is important, or where the installation requires it.

S240 is for installations where side wall access only is available

S100 is for installations where side wall access only is available

SIDE DISCHARGE

Side discharge systems may be either wall or floor mounted and are suitable for discharging directly into a wall register. They may also be ducted into a ceiling cavity, depending on the application. Sound attenuation may be required for a single wall register application.

Operating Weight kg		114kg

COOL MOBILE

The Commercial Mobile evaporative air conditioner is a heavy duty model unit which has many practical applications.

SIMPLE TO USE

It's easy - plug it into a standard electrical wall outlet and connect to a water supply with a fixed hose connection. If a water outlet is not available, the Cool Breeze Mobile can be filled manually with a hose.

FEATURES

- 100mm thick Celdek pads ensure an unrestricted even airflow.
- Large capacity 100lt water tank with drain.
- Easy to move with heavy duty wheels, two with brakes.
- Robust powder coated steel frame
- Fully adjustable multi-directional grille.
- Optional transport frame available.
- All polymer construction - no corrosion.
- Low maintenance.
- Quieter operation - special dimpled fan.

The Commercial Mobile has a direct drive fan coupled with a heavy duty motor, which ensures long term performance.

MODEL		FM240 - MOBILE
Motor	Voltage (V)	220-240
	Watts	2x1000W
	Amp Draw - low/high current (AMPS)	2.9/5.6
	RPM - low/high SPEED (RPM)	850/1410
	Watts - Low	680
	Watts - Medium (1050 rpm)	800
	Watts - High	1270
Fan	Powerflow Fixed Pitch	x
Water	Inlet Connection	1/2 inch BSP
	Drain (TAP)	Manual
	Tank Capacity (Litres)	100
Filter Media - Celdek	Number of Pads	3
	Size mm	3 x 830 x 930
	Thickness mm	100
Cooling Capacity m ³ (Comcool Zone ②)		576
Design Air Flow ① *	cmh	18500
	cfm	11600
	Lit/sec	5400
Depth/Width mm		1130x1220
Height mm		1540
Shipping Weight kg		95
Shipping Vol m ³ -		1.9
Operating Weight kg		195

CONTROLLER

- Six Fan Speed Control - Simply rotate the dial to choose your desired fan speed.
- Fan Only Operation - If required, switch off the COOL MODE to circulate fresh outside air.

WHY CHOOSE

For top air conditioning performance and the best value for money system around, Cool Breeze is the smart choice.

THE POWER OF

RATED PERFORMANCE

Cool Breeze systems have been tested and performance rated. The amount of cooling produced by an evaporative air conditioner is largely dependant on the following factors:

- Fan air flow
- Volume of Celdek Filter Media
- An Efficient Water Management System
- Overall System Design

Compare our larger Celdek filter pads, superior fan performance and higher capacity motors. Cool Breeze systems have one of the highest ratios of air flow and Celdek filter media per square metre of floor area to be cooled, of any system on the market today.

SUPER COOL BREEZE FAN TECHNOLOGY

Our powerful fan blades ensure maximum air flow with minimum noise. Our larger systems are fitted with our “Powerflow” fan blade. Note the “golf ball” like dimpled surface to reduce noise and increase efficiency.

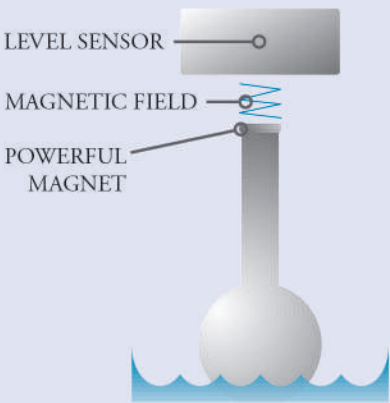

One of the quietest systems in Australia - our testing confirms this. An efficient design coupled with the noise absorbing polymer construction and our advanced fan technology including the unique position of the fan all combine to make our Cool Breeze air conditioner the benchmark in our industry.

All Cool Breeze units have a direct drive fan connected to a heavy duty motor, which ensures long term performance: No belts or pulleys to maintain.

MAGNA-SENSOR*

• So Simple - So Reliable

The end of periodic water level adjustment. Cool Breeze systems have our very own automatic water level adjustment system. Accurate to within 1mm, no more sticky ball floats, or rubber washers to wear. No more electronic probes to become corroded. Our MAGNA-SENSOR is guaranteed never to require adjustment. The simplicity and accuracy of the MAGNA-SENSOR uses magnetic field technology to measure and regulate water flow and levels in the base.

(*NOT A MOBILE UNIT)

DURABLE POLYMER CONSTRUCTION

Manufactured by BASF Luran-S is a premium grade and exceptionally tough polymer, specifically designed to withstand the most trying environmental conditions. This has been proven by numerous tests in the extreme deserts of Australia and the United States.

It's integral strength, resistance and durability to weathering, including UV degradation is unmatched by any other casing material. There is absolutely no corrosion that is common in metal casings.

LOWER MAINTENANCE

Reduced maintenance means lower costs, longer life.
Always ready to cool when required.

WATER MANAGER*

Cool Breeze Systems Have a Water Management System Installed as Standard.

We believe that an Auto Drain and Clean Water System is a vital and necessary part of every air conditioning system, unlike some of our competitors who offer it as an optional extra.

(*NOT A MOBILE UNIT)

• Clean and Dry Tank

When your system is switched off, all water is drained from the tank. This means no mouldy smells or stale water.

• Uses Less Water

Unlike bleed-off systems which continually drain water in order to maintain water purity, the Cool Breeze Water Manager effectively minimizes water usage by only diluting and replacing the water in the tank when necessary.

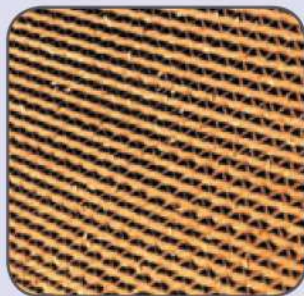

• Cooler Air

Cleaner pads and cleaner water means higher saturation efficiency and therefore cooler air.

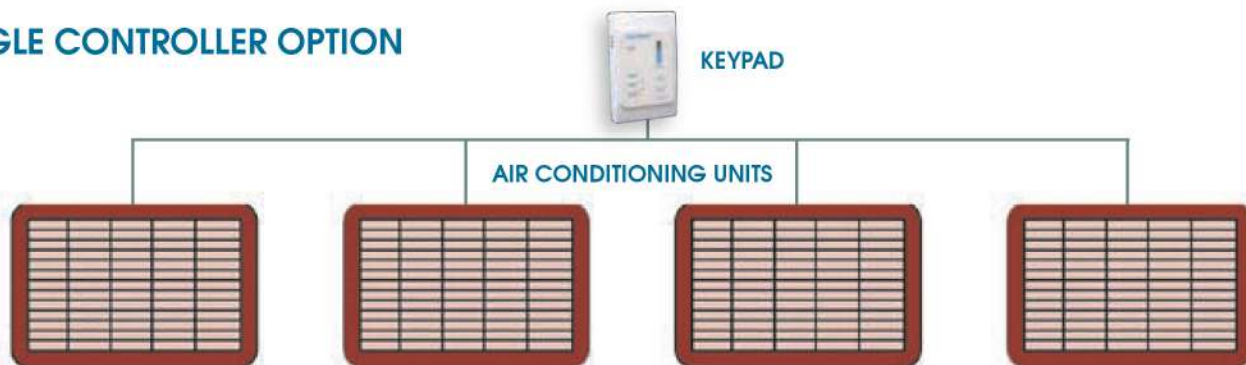

• Drain Valve

The heart of the Cool Breeze Water Management System is our very own unique patented Drain Valve. Using the simplest counterweight principle of a tank of water and leverage to open and close the valve, we feel that our drain valve could almost last forever.

There is virtually nothing to break or wear. Unlike some of the competitors who use electric motors, solenoid valves and complex pressure systems, the design simplicity and reliability of our system is a first in our industry. The best ideas are usually the simplest.

SINGLE CONTROLLER OPTION

This option provides full control of a series of air conditioning units all from the one keypad controller.

- Operation of multiple air conditioning units using one keypad
- Eliminates the need to run cable to individual control switches resulting in lower installation costs.
- Convenience of only one keypad per group of units.

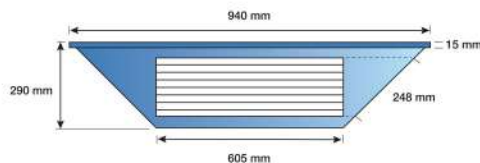

CEILING PLENUMS

For top air conditioning performance and the best value for money system around, Cool Breeze is the smart choice.

- White all-polymer (ABS) construction
- Blades - anodised aluminium
- Adaptors 2 & 3 designed to replace two standard T-Bar mounted ceiling tiles.

MODEL AGP2

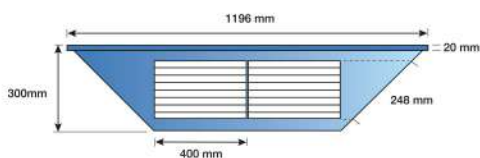

Suits 550 x 550 dropper with optional Adaptor 2.

Adaptor 2

MODEL AGP3

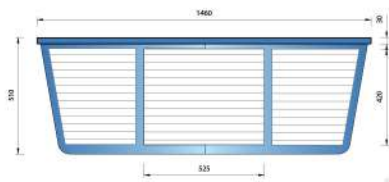

Suits 550 x 550 dropper with optional Adaptor 3.

Adaptor 3

MODEL AGP4

Suits 550 x 550 dropper with optional Adaptor 4.
Cool Breeze twin fan unit.

Adaptor 4

PLENUM	FREE AREA M ²	CAPACITY M ³ AT 6.5M/SEC	CAPACITY M ³ AT 7.5M/SEC
AGP2	.62	14500	17000
AGP3	.83	19500	22500
AGP4	1.30	30500	36000

① Allows comparison with systems rated under the old "Air Flow" and "Air Change" method of sizing which were based on "Design" or nominal air flow ratings.

② Based on Comcool Zone 2 at 2.4m ceiling height. Comcool is an Air Group Australia design system used for sizing evaporative air conditioners in various regions of Australia. Consult your dealer for details.

Air Group Australia reserves the right to make product changes without prior notice.

Evaporative air conditioning cooling performance is affected when high humidity conditions exist.

Installation and commissioning to manufacturer specifications, industry standards and state regulatory laws is the responsibility of the installer.
