JF -1602

Hot & Cold Cutting Machine

This machine helps in cutting shoe laces, velcro, plastic zipper, webbing, string belt loops, shrink tube, strings specially in the 5mm above the material. It works automatically only by setting length & quantity. Its cutting area will be 160mm.

JF-W1206

Hot & Cold Cutting Machine

This machine helps in cutting shoe laces, velcro, plastic zipper, webbing, string belt loops, shrink tube, strings specially in the 5mm above the material. It works automatically only by setting length & quantity. Its cutting area will be 120mm.

JF -1602-1

Elastic Losing Machine

This machine helps in losing elastic to be cut easily and in equal size & correct shape in hot & cold machine.

JF-009

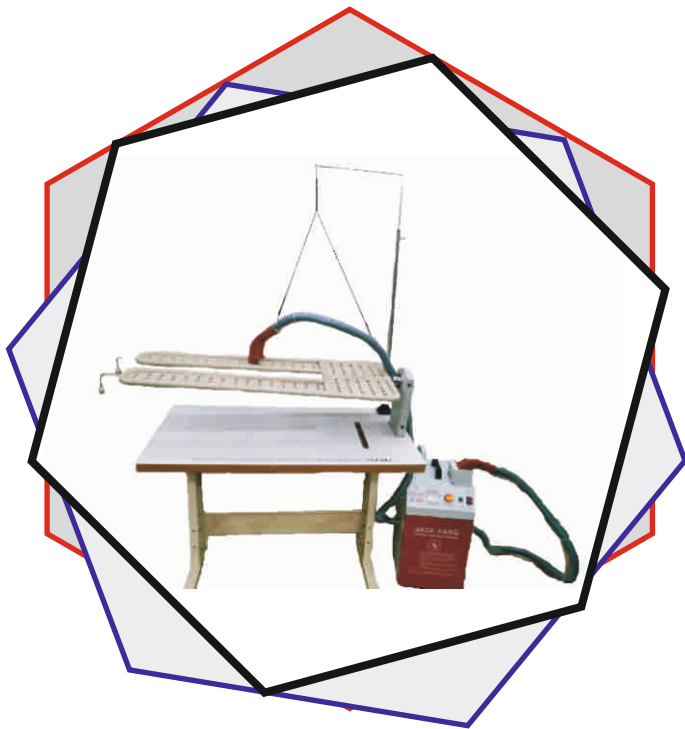

Fuzz and Lint Remover Machine

This machine helps in cleaning all the fuzz or lint particles with its heavy brush. Specially on black fabrics.

Socks Trimmer & Turner Machine

This machine helps in two different ways, it sucks the extra thread of socks from the internal side and then it flips the socks to its external side.

Thread Trimming Machine with Turning Stand

This machine stand helps in trimming extra threads of Jeans, trousers and pyjamas from both sides internally & externally both by flipping.

JF -999

Thread Cutting Machine

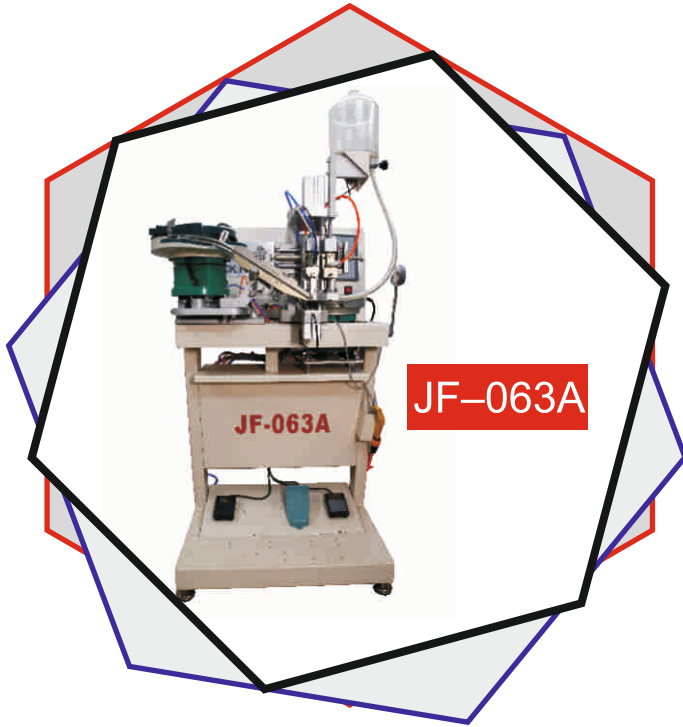

This machine can be used in all types of footwear, garments and bags etc. Helps in finishing extra threads. The machine also lowers the technical dependence of operator and the damage to the material.

JF -909

Thread Cutting Machine

The machine can be operated individually at the same time with dual operating system. This machine can be used in all types of footwear, garments and bags etc. Helps in finishing extra threads. The machine also lowers the technical dependence of operator and the damage to the material.

Multifuction Pearl Fixing Machine

This Machine is used for riveting work of 4mm to 12mm round pearl, 6-10mm half round/cone/pyramid/arch/crystal pearl/hedgehog ball/acrylic crystal and stars etc. and four claw nail, Mainly suitable for shoes, garments, bags and leather goods etc.

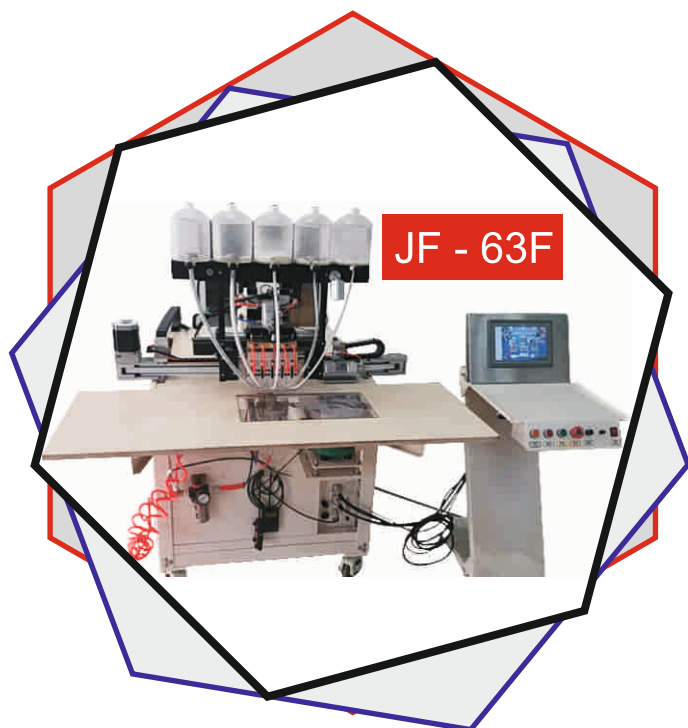

Double Head Pearl Fixing Machine

This machine is used for riveting work of 4mm to 12mm round pearl/hedgehog ball can rivet simultaneously two colours and different sizes of pearl & four claw nail. Mainly is suitable for shoes, garments, bags and leather goods etc.

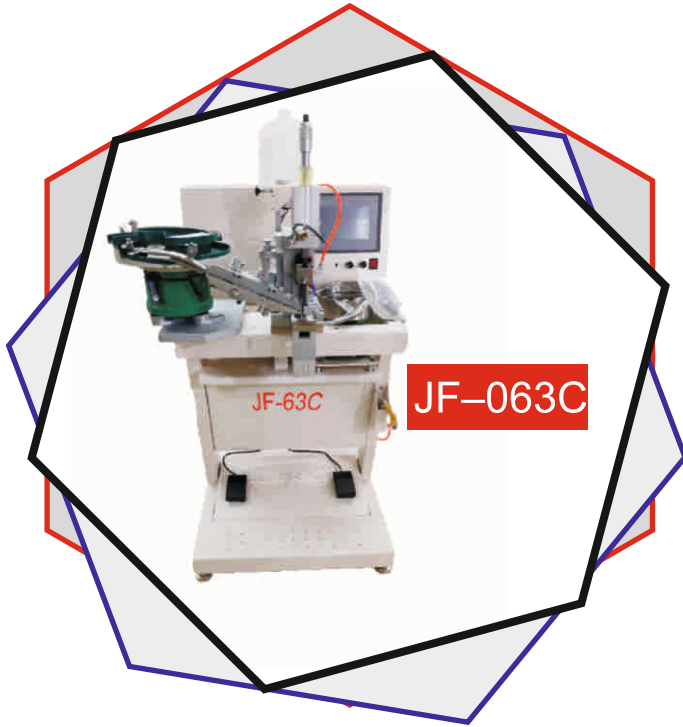

Single-Head Pearl Fixing Machine

This Machine is used for riveting work of 4mm to 12mm round pearl and four claw nail, Mainly suitable for shoes, garments, bags and leather goods.

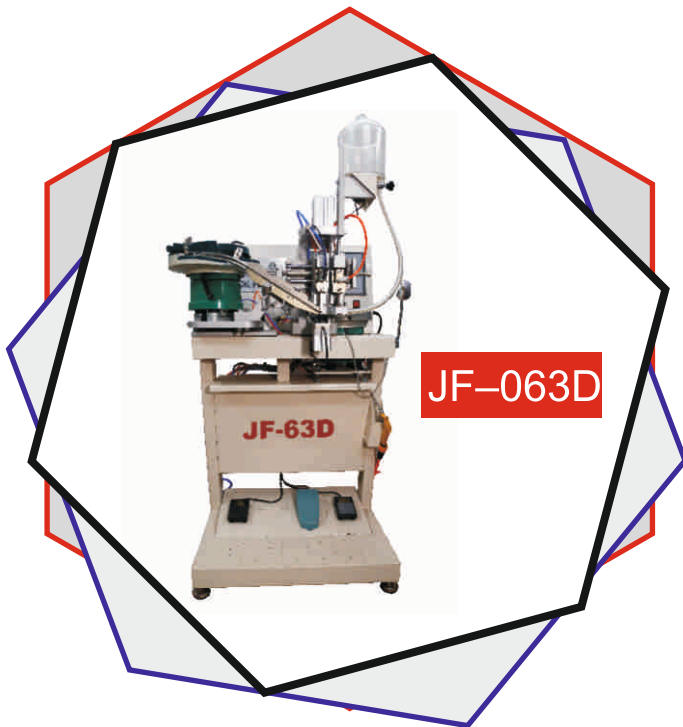

Pearl Fixing Machine 5 Head

It is applied for different kind of regular pattern input by the computer. It can resolve the problem which occurs about the neatness in manual operations. Easy operation as well as the accurate positioning, with different colours and pearls, it can make the dress, handbag, cap, shoes, pillow etc. becoming a wonderful artwork.

Studs Riveting Machine

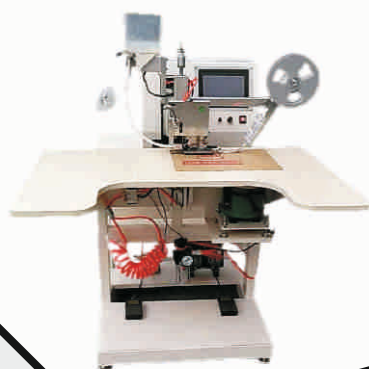

This machine is used for riveting work of 6mm to 10mm half round / cone / pyramid / truncated cone & nail riveting. Mainly suitable for shoes, garments, bags and leather goods etc.

Multifunction Pearl Fixing Machine (Diamond)

This Machine is used for riveting work of 4mm to 12mm round pearl, 6mm / 7mm / 8mm / 10mm diamond and four claw nail. Mainly suitable for shoes, garments, bags and leather goods etc.

JF -63S

Pearl Fixing Machine with Sequence

This machine is used for riveting work of 4mm to 12mm round pearl with sequence and four claw nail, Mainly suitable for garments, shoes, bags &

JF-801

Automatic Cloth Cutter

The product can cut 45 degrees of fabric. And the cutting width ranges from 15mm to 90mm. It is a necessary machine for the majority of apparel manufactures.

Four Claw Riveting Machine

This machine adapts to attaching four claw nails to shoes, clothing, bags etc. It has advantages of location by the laser irradiation, easy operation & high efficiency. This machine suits to round nail whose size is 2.3mm to 10mm.

Semi-Automatic Button Machine

It is set with a counting function to accurately record the labour efficiency and facilitate calculation. A safety function is increased to guarantee the safety. It is 15-30% faster than a manual button attaching machine. The riveting force is uniform and firm.

JF - 819

Electric Snap Button Machine

This machine adopts direct-drive servo motor. Only start the motor in the moment of fixing button, other time under standby situation. Compare with traditional machine, it saves more than 90% of power.

JF-18

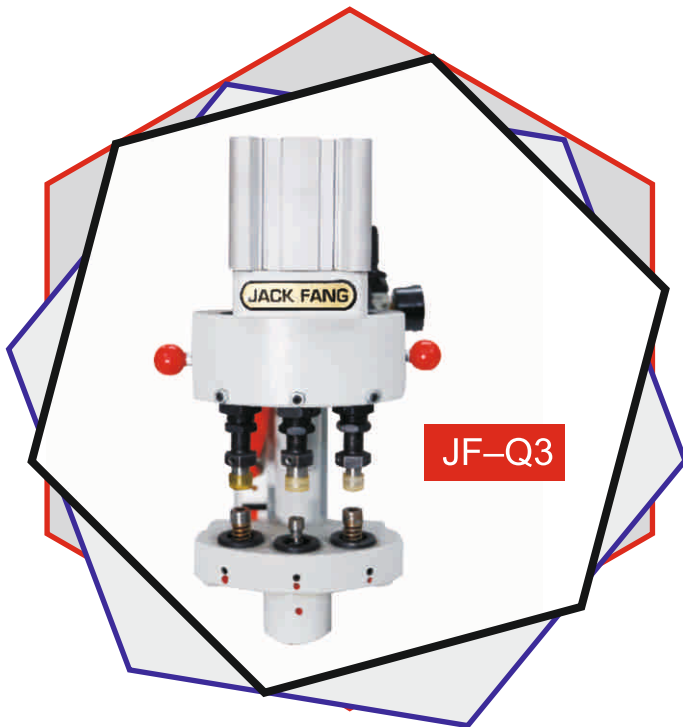

Electric Snap Button Machine

This machine is energy saving, comes with LED lamp, anti scour hand. It can be applied to clothing, shoes, hats, umbrellas, knitting, jeans, leather, tents and other industries.

Manual Button Attaching Machine

Applicable to rivet varied studs and eyelet on shoes, bags and garments etc. Pneumatic infared button attaching machine starts by air with high efficiency, energy economy and safety environment protection.

Manual Button Attaching Machine

The multi-headed studs and eyelet attached machine could fix any studs and eyelet mould at one time and switch easily, so it is in favour of fixing various kinds of studs and eyelets on one material at one time.

JF-2808

Pneumatic Button Attaching Machine with Safety Device

Applicable to rivet varied studs and eyelet on shoes, bags and garments etc. Pneumatic infared button attaching machine with its safety feature starts by air with high efficiency, energy economy and safety environment production.

JF-3807

Pneumatic Button Attaching Machine 3 Head with Safety Device

The Multi-headed or 3 Head studs and eyelet attaching machine could fix any studs and eyelet mould at one time with its safety feature and switch easily, so it is in favour of fixing various kinds of studs and eyelets on one material at one time.

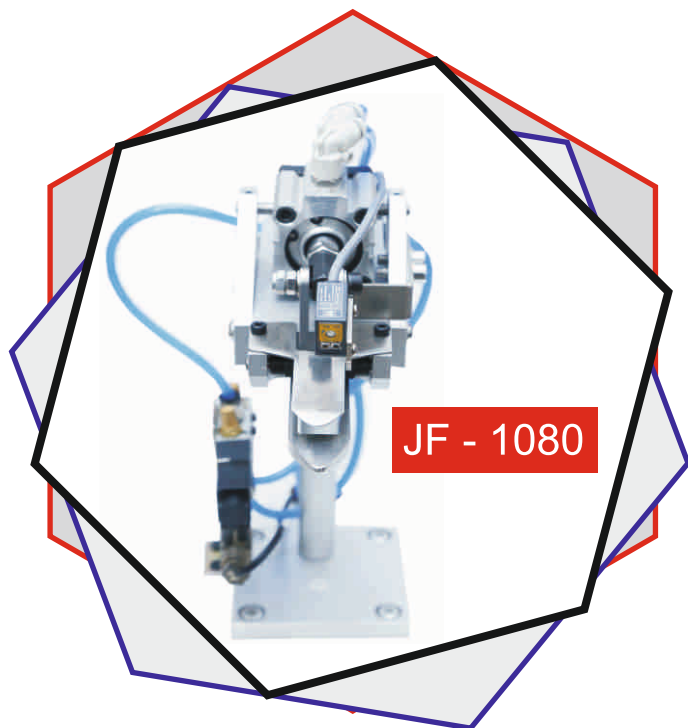

Air Compressor

It is helpful with garment and another machinery. It helps creating an Environmentally clean operation. Routine maintenance is reduced to components.

Manual Loop Trimmer Machine

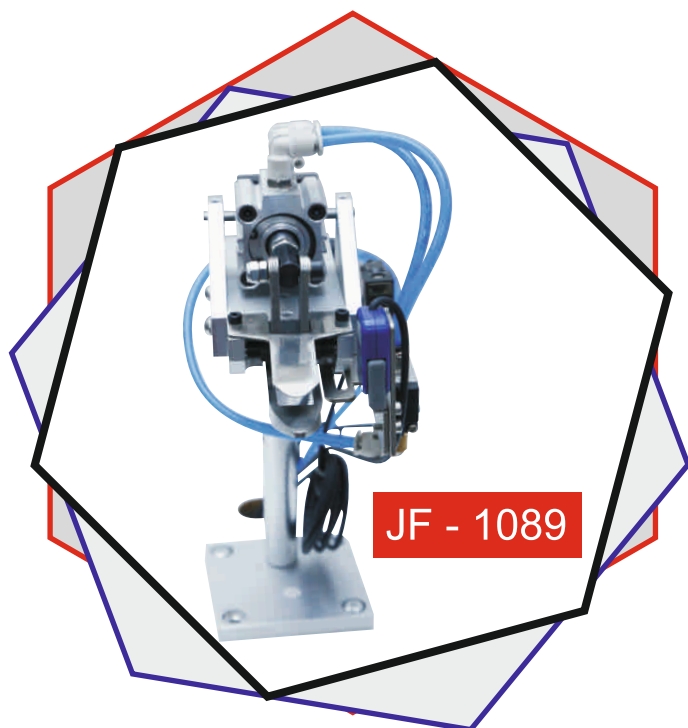

Belt loop trimmer ready for manual operation & shut-off valve. This pneumatic cutter is designed to cut ready sewn belt loops on trousers, skirts & overcoats. Easy to operate, optimum & regular cut, no efforts for the operating personnel.

JF - 1080

Sensor Loop Trimmer Machine

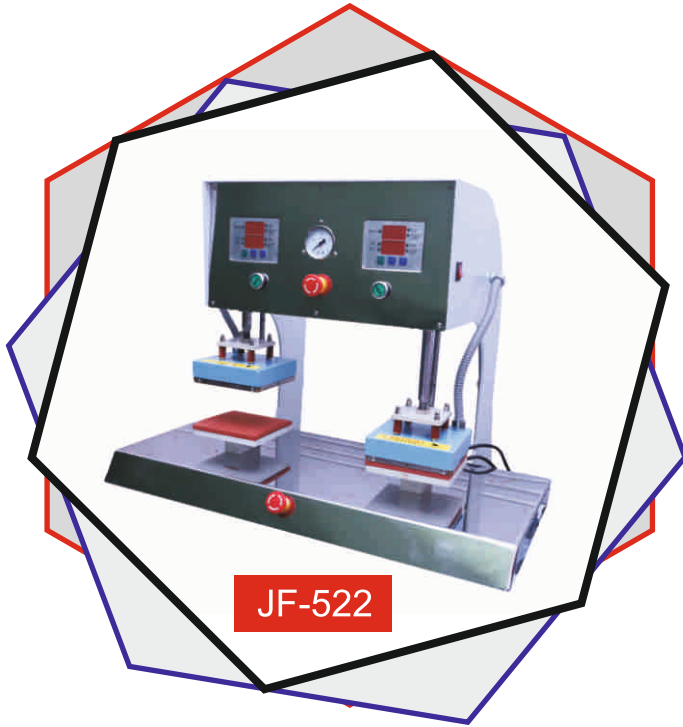

The machine has automatic sensor system, which cut loop with its sensing power automatically, close loop control with linear scale to make the cutting quality be perfectly match with the design.

JF - 1089

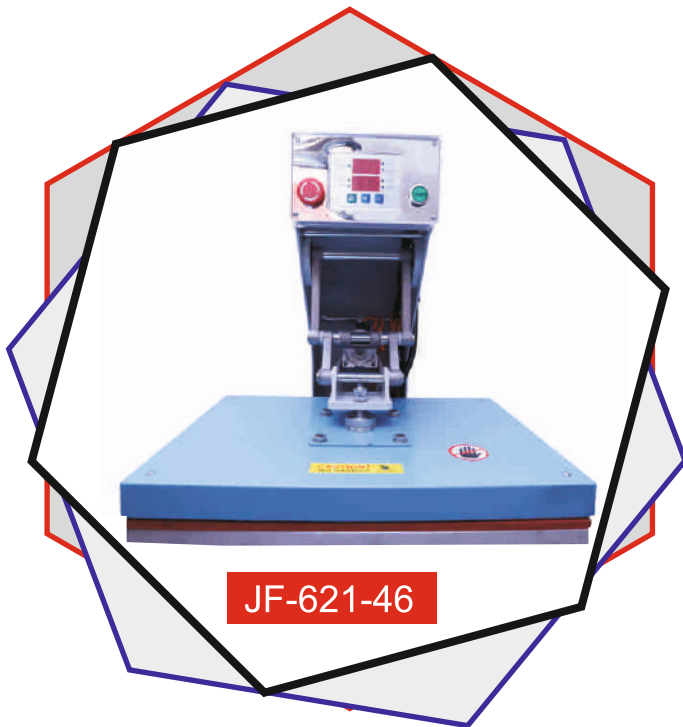

Semi Automatic Loop Trimmer Machine

Designed to trim all types of belt loops with the help of semi automatic button system which cut loop over a fixed light route with gantry style design. Suitable for all garment manufacturing. The machine use separation of pants & belt loops technology to improve the qualification rate of product.

Mini Double Location Heat Press Machine

This machine can be easily operated, directly under pressure. Teflon membrane heating plate is used, no need of using Teflon cloth.

Double Cylinder Composite Heat Press Machine

According to heat transfer time and efficiency, one worker can operate one to three machines at the same time, greatly improve work efficiency, save the work place.

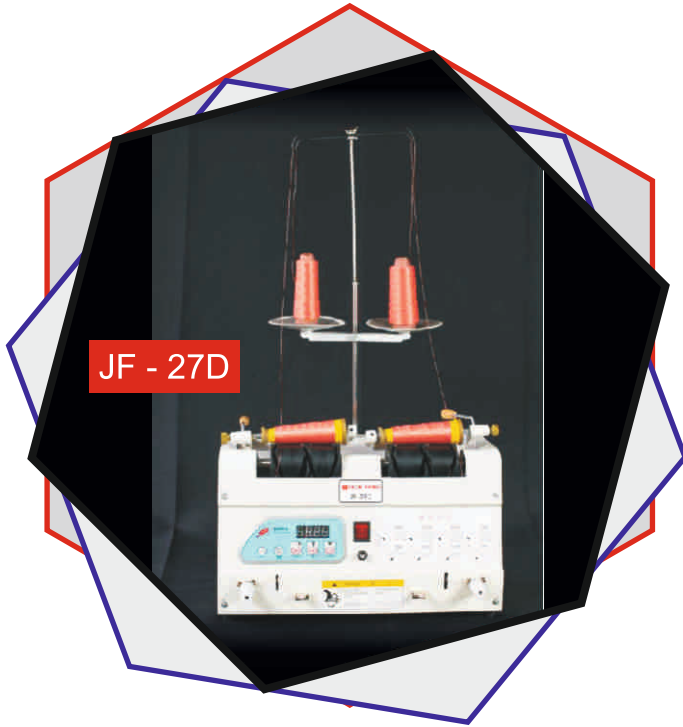

Jeans Damage and Patch Sticking Machine

This cylinder bed heavy duty lockstitch sewing machine specially designed for production of denim jeans.

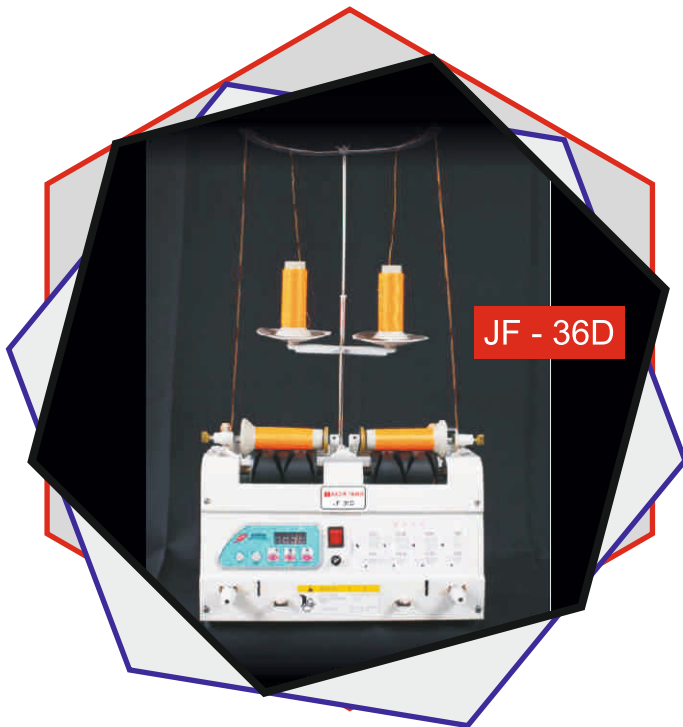

Tape Sticking Machine

This machine helps in stitching the tape to garments without opening the seam of the garment.

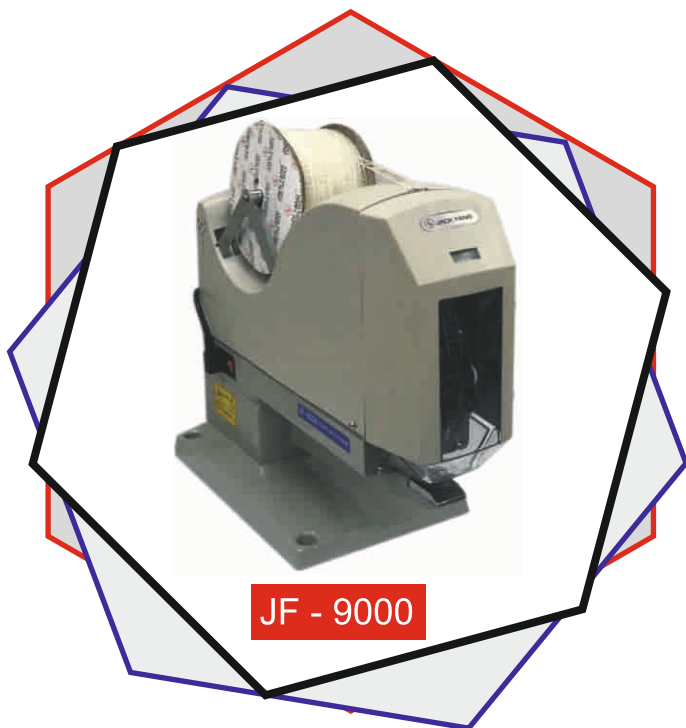

Microcomputer Thread Distributer

Adopts micro-computer, according to produce, customer can set up the thread length, attaining to save to use the thread purpose. The customer can judge the thread whether enough through the thread examination function.

Microcomputer Thread Distributer

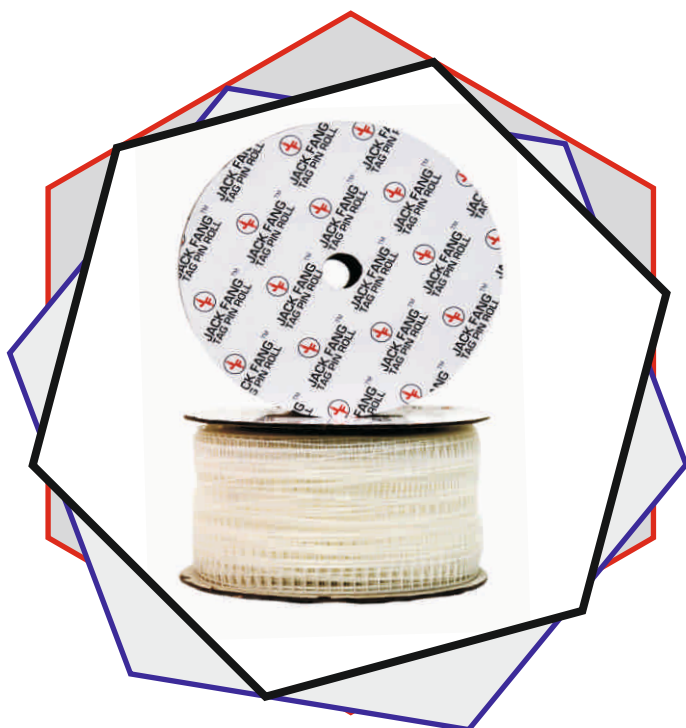

Adopts micro-computer, according to produce, customer can set up the thread length, attaining to save to use the thread purpose. The customer can judge the thread whether enough through the thread examination function.

JF - 9000

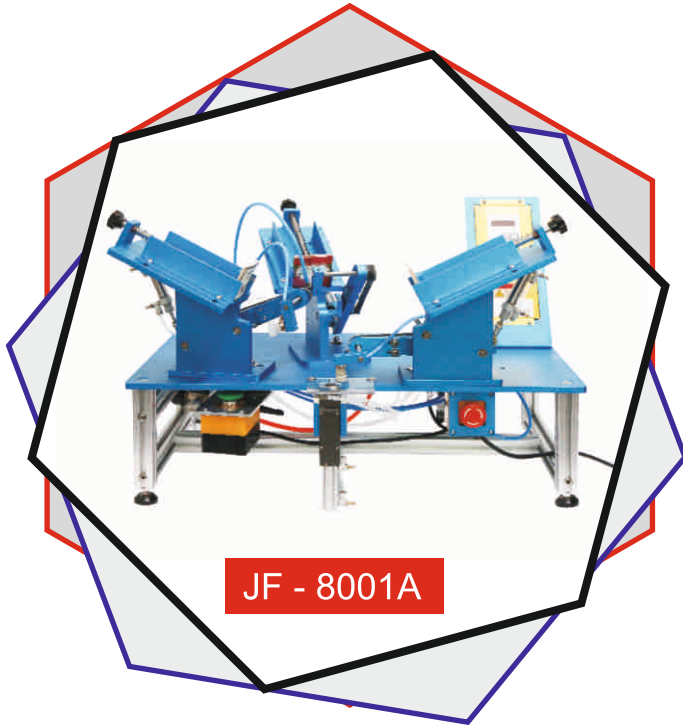

Garment Stapler Machine

Plastic Staple Attacher is a multifunction binding machine, It can help quickly and conveniently bind brand -name tags, product codes, size labels, price labels and other labels took clothes costumes, paper, paintings or other products made of soft materials also can apply to stone washer process of jeans.

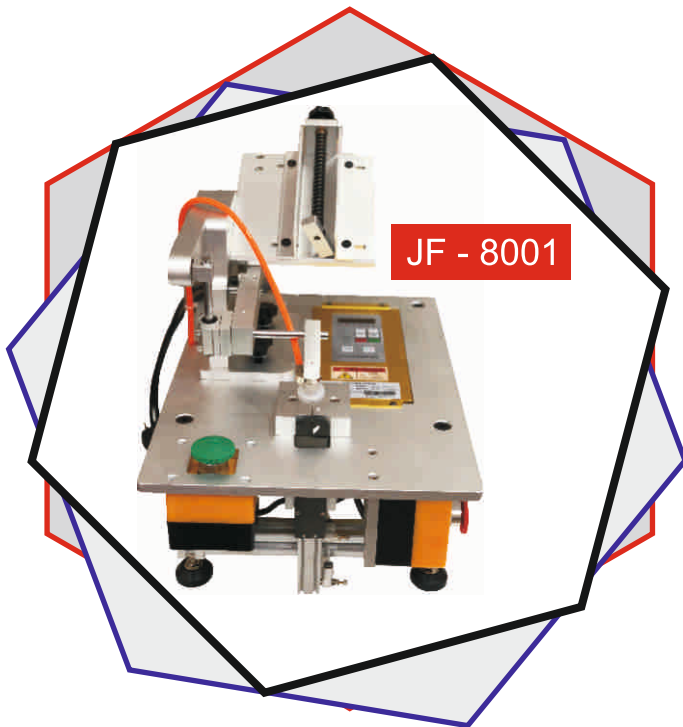

Tag Pin Roll (13mm)

Tag plastic staple tag pin, which is always an ideal solution for tagging trousers, jackets creating washing effects. It can be more convenient than traditional thread stitching. Its toughness is very good and not easy to snap or break.

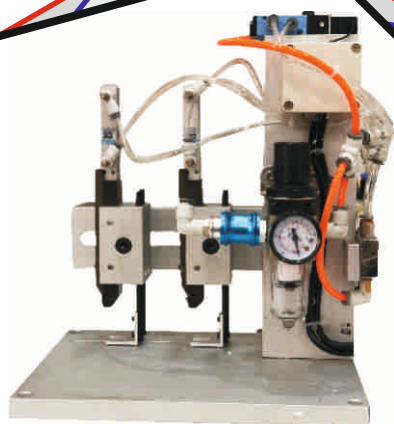

Auto Sending Label Tagging Machine With Three Tag

It helps by sending tags automatically just we have to stick it with the garments.

Auto Sending Label Tagging Machine

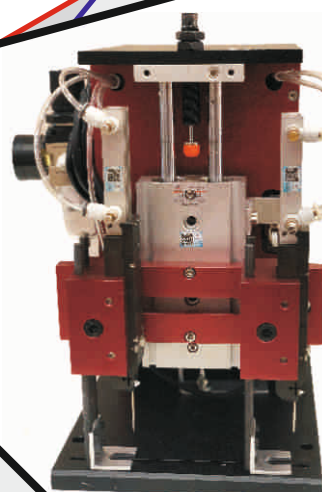

It helps by sending tags automatically just we have to stick it with the garments.

JF - 5211A

Double Needle Tagging Machine

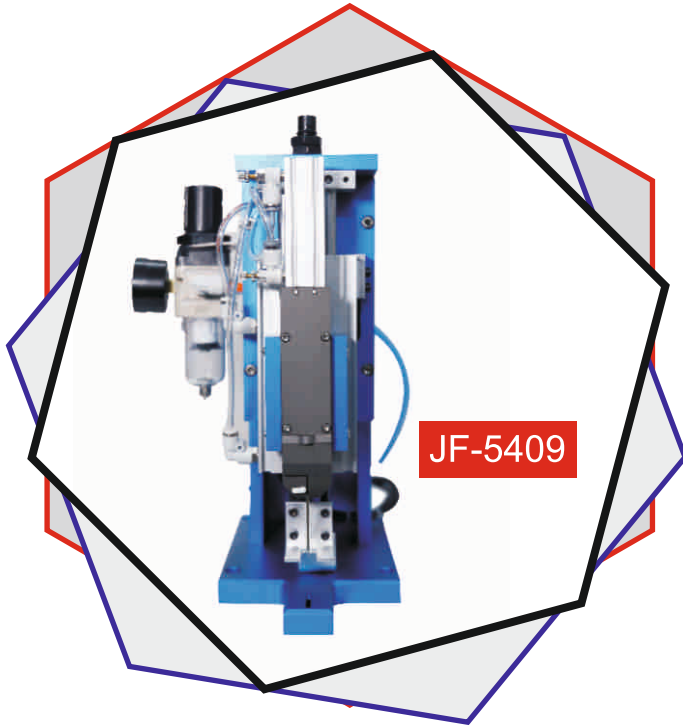

It helps in tagging towels, carpets and wash cloth with the help of double needle. Its width can be adjusted easily.

JF - 5211B

Heavy Duty Double Needle Tagging Machine

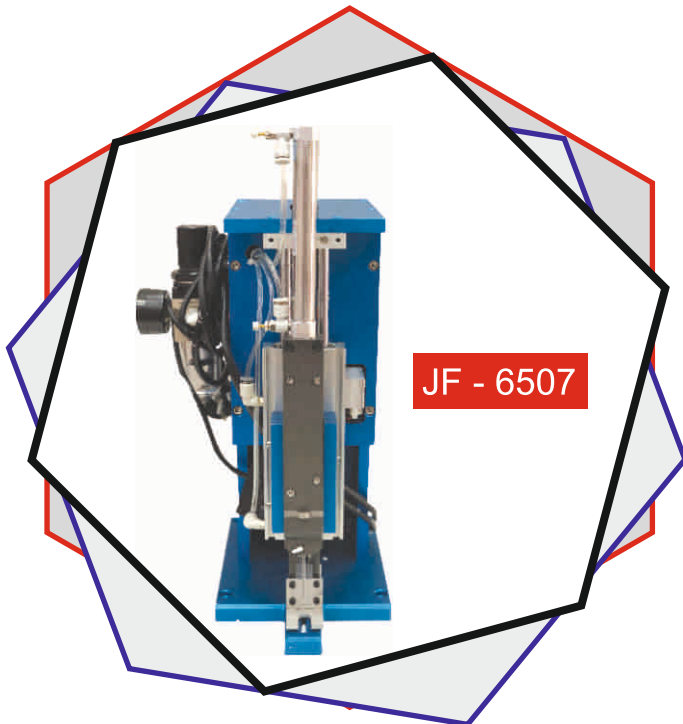

It helps in tagging thick carpets and car mats with the help of double needle. Its width can be adjusted easily.

JF-5409

Socks & Gloves Tagging Machine

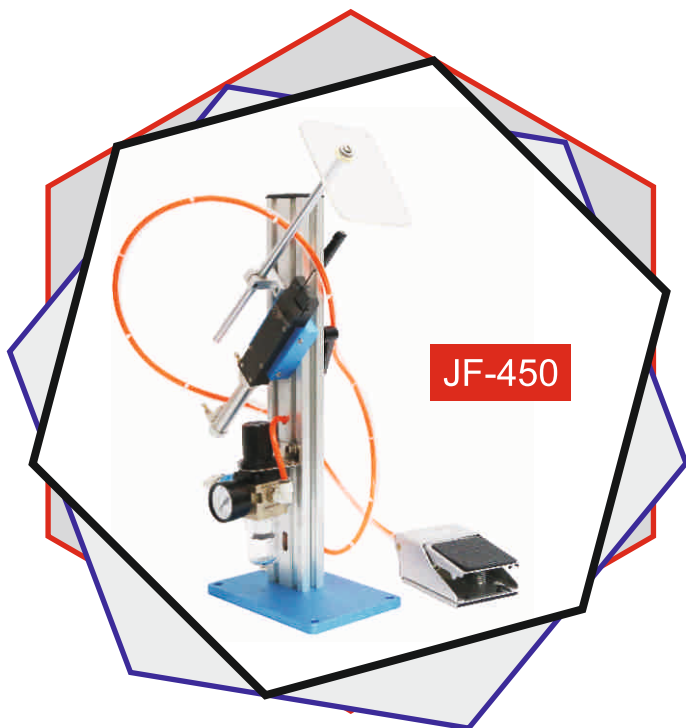

Pneumatic Tagging Machine used for tagging on socks, towels, gloves etc. One machine can do tagging 1850 pair socks per hour, one worker manually finish tagging on 300 pair per hour. One machine can replace two to three workers on tagging job.

JF - 6507

Heavy Duty Single Needle Tagging Machine

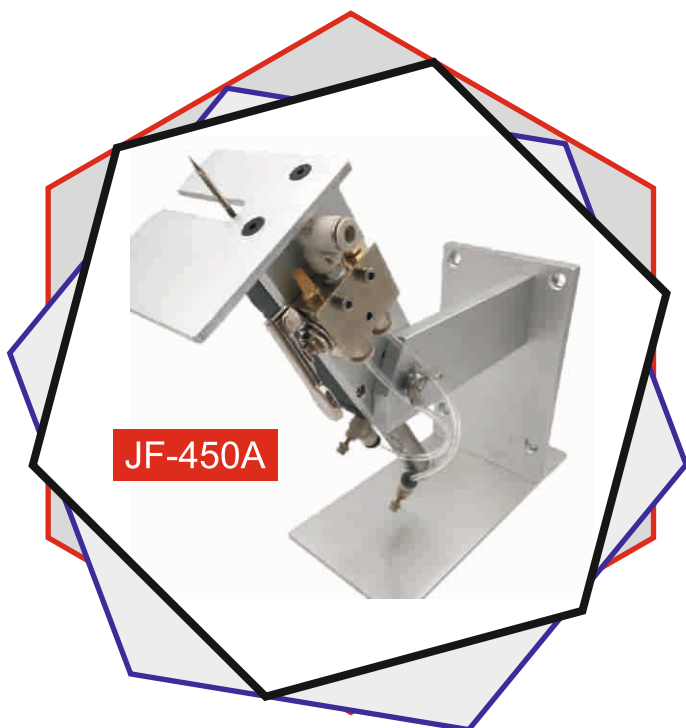

It helps in tagging thick carpets and car mats with the help of single needle. Its width can be adjusted easily.

JF-450

Shoes Tagging Machine

Pneumatic Tagging Machine used while after production of shoes upper to give their exact shape of a shoe with the help of heavy duty tag pin. One machine can replace two to three workers on tagging job.

JF-450A

J-Hook Socks & Gloves Tagging Machine

Pneumatic Tagging Machine used for J-Hook tagging on socks, towels, gloves etc. One machine can do tagging 1850 pair socks per hour, one worker manually finish tagging on 300 pair per hour. One machine can replace two to three workers on tagging job.

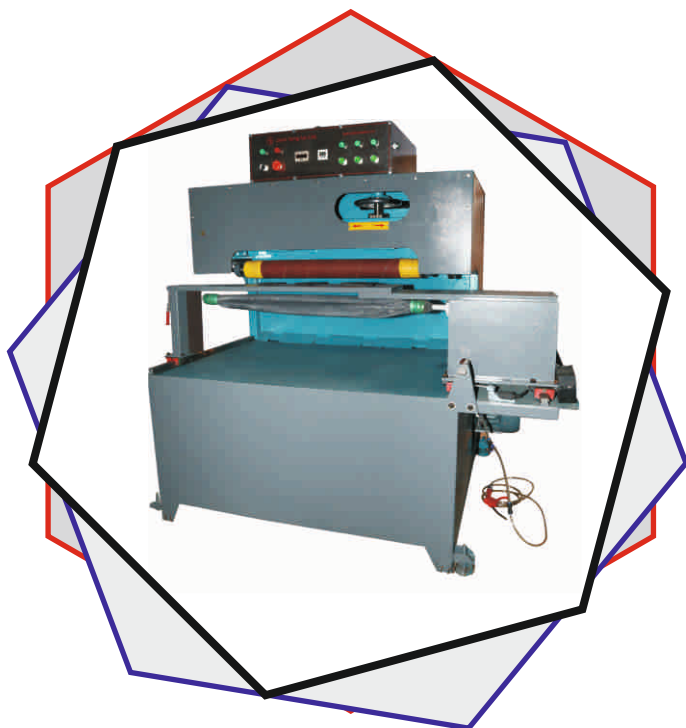

Vertical Garment Steamer

- 1750W Super power, 45 second quickly out of steam.
- 2.8L water tank for 70 minutes continuous steaming.
- Two power selections for different materials garment steamer series.

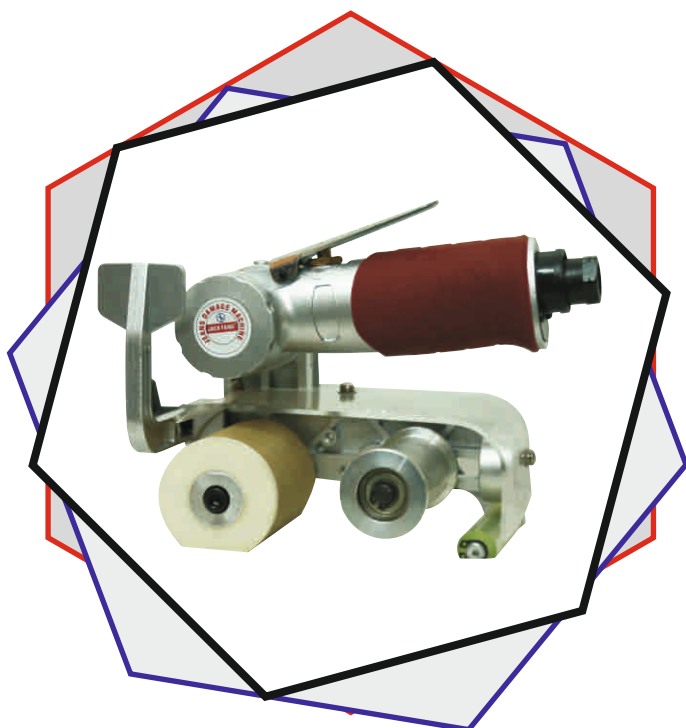

Automatic Rhinestone Machine

The ultrasonic automatic hot fix rhinestone features automatic material feeding on the basis of manual product, thus greatly improve the speed of hot fix rhinestone and reducing the labour intensity of the operator, it is equipped with two feeding one or two plates which are capable of pressing rhinestone of different colours or specification

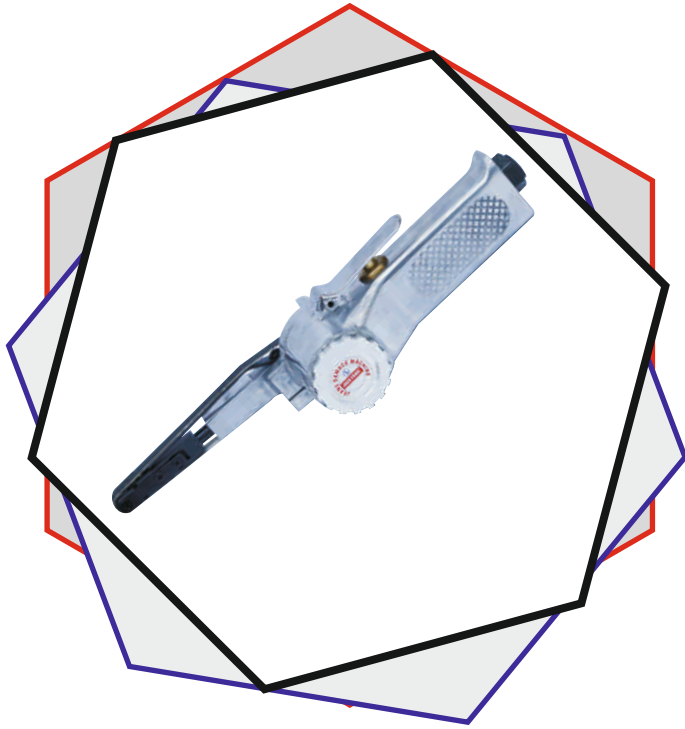

Automatic Jeans Damage Machine

Manual load jeans on the mold, the machine works by the main shaft grinding wheel rotating and the mold horizontal movement to realize needed hand brush, suspension grinding and whisker effect. Effect is consistent and natural, easily realized by machine

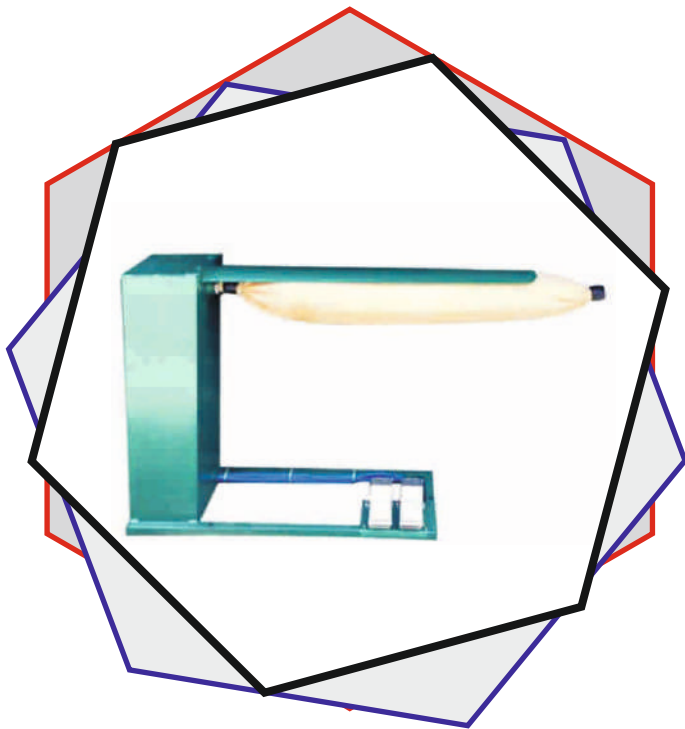

Manual Jeans Damage Machine (60mm)

This machine is a new design for jeans process, which is used for making ripped effect.

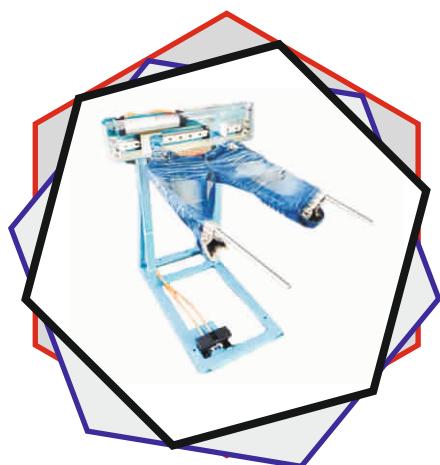

Manual Jeans Damage Machine (10mm)

This machine is a new design for jeans process, which is used for making ripped effect in difficult parts of jeans like pocket area etc.

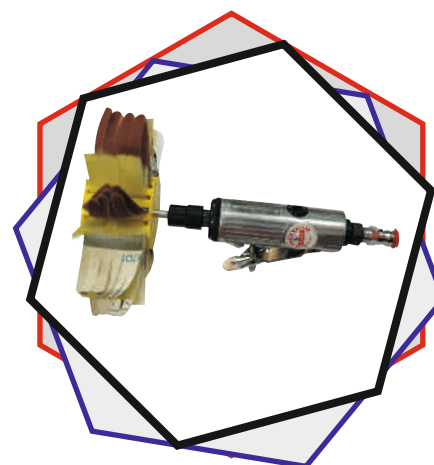

Jeans Damage Stand

This damage stand is used to scrape the denim with a special motor brush. Scraping can help to remove the dyeing roots on denim & show a special fading effect.

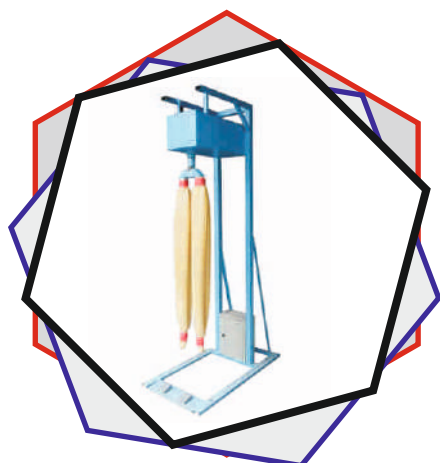

3D Scratch Stand

This stand can be used for 3D scratch grinder for jeans.

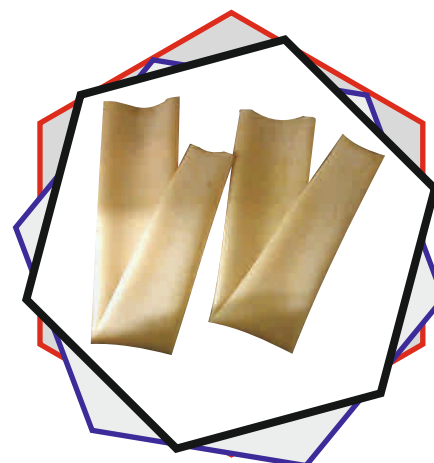

3D Scratch Grinder

Jeans pneumatic emery paper wheel is a kind of accessories of hand brushing machine, which is used for jeans polishing, processing.

Denim Scraping Machine

Jeans scraping machine is a most popular jeans processing machine in jeans industries. Which is used to scrape the denim with a special motor brush (or manual brushing) or pp spray on jeans. It is mainly used for fabric like denim.

Rubber Leg

Rubber leg is used for jeans scraping machine and jeans damage machine etc.
